Siddha System of Medicine

OUR POLICY

We are engaged to provide
Safe, Effective and Quality Siddha Medicines
Since the year 1992.

INTRODUCTION

Siddha System of Medicine is the Traditional Tamil System of medicine, which has been prevalent in the ancient Tamil land, is the foremost of all other medical systems in the world. Its origin goes back to B.C 10,000 to B.C 4,000.

The uniqueness of Siddha System is evident by its continuous service to the humanity for more than 5000 years in combating diseases and also in maintaining its physical, mental and moral health while many of its contemporaries had become extinct long ago.

According to this system the human body is the replica of the universe and so are the food and drugs irrespective of their origin and the human body consists of the five primordial elements - earth, water, fire, air and space, the three humours vatha, pitha and kapha and seven physical constituents. The food, which the human body takes and the drugs it uses are all, made of these five elements. The proportion of the elements present in the drugs vary and their preponderance or otherwise is responsible for certain actions and therapeutic results.
